

ABSTRACT OF THE DISCLOSURE

[0035] There is provided a mobile communication device that flexibly supports various services which utilize both Internet 5 communications and short-distance wireless communications. An instruction data receiving section 208 receives instruction data indicating a protocol in which a set of data exchanges are to be performed. An instruction data analysis section 209 analyzes the received instruction data, and controls a reception switching 10 section 203 and a transmission switching section 205 based on a result of analysis. The reception switching section 203 receives data from either an Internet reception section 201 or a short-distance wireless reception section 202 under the control 15 of the instruction data analysis section 209. The transmission switching section 205 outputs data to either an Internet transmission section 206 or a short-distance wireless transmission section 207 under the control of the instruction data analysis section 209.
